anti-epileptic drugs
Photographs of some currently licensed brand and branded generic anti-epileptic drugs (AEDs) used to treat epilepsy in children, young people and adults in the UK.

AEDs are listed alphabetically by their generic name. Where no brand or branded generic version is available, a generic version is included.
*Indicates where generic versions are also available.

Tablets and capsules are shown actual size. Colours may vary slightly depending on the device used to access this information.

For more about licensing and indications for use, see the British National Formulary (BNF) and the British National Formulary for Children (BNFC).

For more information about consistency of supply of AEDs, see page 35.

consistency of supply

“Consistent supply... of a particular manufacturer’s AED preparation is recommended, unless the prescriber, in consultation... considers that this is not a concern.”

For more about consistency of supply visit:
epilepsysociety.org.uk/generic-and-branded-anti-epileptic-drugs
